

We have 'wow' moments!

Our curriculum is **progressive** and we build on what we already know.

We **make links** to what we already know and we remember what we have already found out.

We learn the meaning of **new words** in science that we can use elsewhere.

We **work scientifically** within every science lesson in different ways and using **different skills**.

We share what we are learning with our families.

Science is good at our school when ...

Our vision

We strive to provide a high quality and engaging science curriculum which encourages and enables our children to explore and discover the world around them, sparking their curiosity so that they develop a deeper understanding of our world and beyond.

Learn **practically**, explore ideas and **investigate** to find things out.

We **learn** from our mistakes.

Children **lead** investigations and are **curious** about the world around them.

We have opportunities to **ask** and **answer** questions.

We work **collaboratively** and have opportunities to **talk about** our ideas.

Lessons are **fun** and **interactive**
- we share our thinking in a **purposeful** way.
